

NEWS RELEASE

The Base Processes Library now available from TickIT*plus* website

Ely, England, 27 June 2011 – It has been announced today that the Base Processes Library (BPL) - the essential tool for all organisations pursuing TickIT*plus* certification - has been published. The BPL can be purchased via TickIT*plus* [website](#) in pdf format, for immediate download.

TickIT*plus* is the successor of TickIT and is designed to meet the diverse needs of the modern IT industry, demonstrating compliance to a best-practice model and a capability dimension to ISO15504. The scheme provides improved process modelling to facilitate more efficient business and quality systems planning and improvement. TickIT*plus* also gives entry level access to capability grading for small IT organisations and offers significant cost savings for those already pursuing both ISO9001 and Capability Maturity Measurements.

BSI has recently published the Requirements for Training Courses and Examinations (RTEX) and Requirements for Assessors & Practitioners (RAP) and these documents are also both available for download from www.tickitplus.org.

Organisations in general have difficulty with process concepts. The BPL enables consistency of approach and a process baseline for assessment. It deals with processes and procedures and as such focuses more on general IT and less on software development. In order to become TickIT*plus* certified, organisations must meet the requirements as set out in the BPL. The BPL can be purchased today via the TickIT*plus* [website](#).
