

NEWS RELEASE

Logica now certified to TickITplus Foundation level

Ely, England, 19 July 2011 – It has been reported that Logica, one of the biggest business and technology service companies globally, has been successfully certified to the TickIT^{plus} Foundation level by the UK Certification Body DNV Certification BV (www.dnv.co.uk/certification). Logica (www.logica.co.uk) has followed other organisations, to meet the requirements of the TickIT^{plus} scheme which has replaced the highly regarded TickIT scheme earlier this year.

TickIT^{plus} offers a number of benefits to different stakeholders. For customers, TickIT^{plus} can be used as a measure of a supplier's process capability and maturity, especially in procurement selection, to reduce risk. For organisations implementing TickIT^{plus}, business risk is reduced as a result of increased capability, embedded best practice and creation of a culture of continuous improvement.

Successful certification to the TickIT^{plus} Foundation level has been made easier since the release of the TickIT^{plus} [Kick Start Guide](#) and the [Base Process Library](#).

As an introductory guide, the TickIT^{plus} [Kick Start Guide](#) concentrates specifically on achieving the Foundation level of the scheme, either through initial entry or transition from the existing TickIT scheme. The [Kick Start Guide](#) can be purchased today from www.itgovernance.co.uk/products/3469.

The BPL, which enables consistency of approach and a process baseline for assessment, can be purchased from www.itgovernance.co.uk/products/3460.

In order to ensure a full understanding of the TickIT^{plus} requirements and the smooth implementation of the scheme, professionals should consider booking on the TickIT^{plus} [Foundation Course](#). More details are available here www.itgovernance.co.uk/products/3334.
