Preface

TickITplus is gaining popularity across the world, including not only in UK, but also in Sweden, US, Middle East and many other areas. This certification scheme is succeeding in helping organizations develop, implement, improve and certify their integrated management systems. TickITplus is the most flexible, multi-level approach to IT quality and certification assessment on the market.

This release of the Base Process Library has been created to specifically include mappings to ISO/IEC/IEEE 12207:2017 and ISO/IEC/IEEE 15288:2015. While doing this, it was necessary, and appropriate, to make a few changes to the core Base Practices linked to ISO 9001.

As the number of mapped standards has increased, the BPL is now being issued as a main standard (for ISO 9001, ISO/IEC 20000-1 and ISO/IEC 27001) and variants that address ISO 9001 plus one or more related standards that focused on certain sectors. Initially 2 variants have been defined: Variant A covering ISO 9001 (as the core standard), ISO/IEC/IEEE 12207, ISO/IEC/IEEE 15288 and BS 10754 (formerly PAS 754) and Variant B covering ISO 9001 and ISO 26262.

Work continues to evolve the Base Process Library mapping to other international standards with AQAP 2210 and AS 9115 currently being mapped. Further standards being considered include the more general safety standards ISO 61508 for safety and ISO 62304 for medical device software.

Werner Henschelchen
Chairman of the ITA

Introduction

1 Overview

This is the baseline document for the TickIT*plus* Base Process Library (BPL), and it is also part of the initial baseline documentation set for TickIT*plus*. It details:

- Scope Profile to process mapping.
- Processes.
- Mapping between requirement and reference standards and processes.

2 Coverage

The main version and variants of the BPL provides coverage of ISO 9001:2015, ISO/IEC 20000-1:2018, ISO/IEC 27001:2013 and 2022, BS 10754:2018 (formerly PAS 754), ISO 26262:2011, ISO/IEC/IEEE 12207:2017 and ISO/IEC/IEEE 15288:2015 for all 40 TickIT*plus* processes and the eight TickIT*plus* Scope Profiles:

- Information Management and Security.
- Service Management.
- Systems and Software Development and Support.
- Project and Programme Management.
- Corporate Strategy Planning and Management.
- Legal and Compliance.
- Product Validation, Quality and Measurement.
- IT Systems Engineering and Infrastructure.

3 Scope Profiles

Table 1 shows the mapping of Scope Profiles to processes taken from the TickIT*plus* Core Scheme Requirements.

The Domain Engineering process is not selected under any Scope Profile and therefore is always a Type C process¹.

ISO 9001 is the core mandatory standard for the TickIT*plus* scheme and is required in all cases. Therefore, to gain certification under TickIT*plus* there must be an ISO 9001 scope statement and at least 1 associated Scope Profile selected. To include certification for the other standards several rules must be satisfied:

- To include ISO/IEC 20000-1, the Service Management Scope Profile must be selected.
- To include ISO/IEC 27001, the Information Management and Security Scope

¹ Unless ISO 12207 and/or ISO 15288 is being certified, in which case it must be selected, see table 2 for more details

Profile must be selected.

- To include BS 10754, ISO 26262, ISO/IEC/IEEE 12207 and/or ISO/IEC/IEEE 15288 the Systems and Software Development and Support Scope Profile must be selected.

These Scope Profiles can exist on their own and still achieve ISO 9001 and the other standards as long as the organization's ISO 9001 scope is in those areas, e.g. the Information Management and Security Scope Profile can exist on its own and achieve ISO/IEC 27001, so long as the organization provides information management and security services or products under its ISO 9001 scope.

4 Use of the process descriptions

It is a requirement of the scheme that the Process Reference Model (PRM) and Process Assessment Model (PAM) are populated with the process contents as described in this document, according to the scope. Once created, both the PRM and PAM must be subject to version control and comply with the requirements of the current scheme baselines, as identified on the TickIT*plus* website, www.tickitplus.org.

Detailed requirements for the make-up of the PRM and PAM are contained in the TickIT*plus* *Core Scheme Requirements*, which is part of the scheme documentation. However, in summary, for all processes in scope, all base practices and work products must be addressed by the PRM and PAM.

It should be noted that the BPL processes do not repeat the requirements of the referenced clauses of the mapped standards, and, consequently, in implementing an organizational PRM, the requirements of associated clauses in the mapped standards must be considered.

In some cases, the work product names are enclosed in square brackets, i.e. []. These aim to illustrate where the input or output work product is an entity or aspect that is not normally considered a work product. For example, the [Commercial Environment] and [Operating Environment] entries represent the environment in which an organization operates, e.g. legal requirements, operating conditions based on culture, accepted practice and economics. Another example is [Identified Stakeholder] which represents groups of people involved in the process.

A change request form is available to cover all TickIT*plus* documentation and can be found on the official TickIT*plus* website.

Key changes in the document up to the process tables have been highlighted in yellow.

5 BPL applicability

The table below shows the applicability and impact of the latest version of the BPL. Major changes to Scope Profiles are represented by an ‘M’ and minor changes by an ‘m’. For Major revisions there is a 3-year transition or, in the event of a supported Standard revision, whatever the set transition time given for the Standard by the International Accreditation Forum (IAF). For Minor revisions there is a 9-month transition period.

Table 2: BPL applicability and user impact

BPLB Designation	Information Management and Security	Service Management	Systems and SW Development and Support	Project and Programme Management	Corporate Strategy Planning and Management	Legal and Compliance	Product Validation, Quality and Measurement	IT Systems Engineering and Infrastructure	Comments
1.1.1			M				M		This is the first release and impacts the two initial Scope Profiles.
1.1.2		M	M	M	M	M	m		This release introduces new Scope Profiles, processes and some amendments to existing processes which therefore affect existing users of the BPL.
1.1.3	M	m	M	M	m	m	m	M	This release introduces the remaining processes along with a few minor changes to existing processes.
1.2.0	M	M	M	M	M	M	M	M	This version introduces mapping and changes to support ISO 9001:2015 ² along with mapping and additional outcomes to support PAS 754. ISO 9001:2008 and ISO/IEC 27001:2005 mappings have been removed ³ .

² As a consequence of introducing ISO 9001:2015 there have been a number of changes to the ISO/IEC 27001:2013 mappings to provide better alignment.

³ As this is a major change resulting from the up-issue of ISO 9001, the transition requirements to this version are the same as the transition for ISO 9001:2015. Note, that during the transition period, version 1.1.3 of the BPL remains valid, but the references to ISO/IEC 27001:2005 are now obsolete.

1.2.1	m	m	m	M	m	m	m	m	<p>This version introduces ISO 26262:2011 which is optional under the Systems and Software Development and Support Scope Profile. There are a few minor word changes to existing practices affecting TEC.1, TEC.3, TEC.11 and TEC.13 (highlighted). The minor change to TEC.1 Data Management being a Type-A process affects all Scope Profiles.</p> <p>Note that the ISO 26262 standard is split into a number of parts. The clause reference has therefore been created as <part>-<clause>, e.g. ORG.1.BP.2 2-5.4.2.6 refers to clause 5.4.2.6 in part 2. Also note that a number of new Outcomes have been added to address specific ISO 26262 requirements, these are only applicable if ISO 26262 is selected as a certification standard.</p>
1.3.0		M						M	<p>This version maps ISO/IEC 20000-1:2018 into the Base Process Library. As this new version of the standard brings ISO/IEC 20000-1 compliant with Annex SL, the majority of the mapping relates to adjusting the clauses although there have been some changes to wording of TEC.12 Service Level Management to make the handling of Service Requests more explicit.</p>
1.3.1		m							<p>This version includes a few missing references to ISO/IEC 20000-1:2018 in ORG.2, PRJ.5 and TEC.9 which were accidentally omitted in the version 1.3.0 publication.</p> <p>Any Organisation using ISO/IEC 20000-1:2018 under the TickITplus scheme should have already covered these in order to achieve certification, but a review is necessary to ensure that the TickITplus processes mentioned have been fully addressed.</p>
1.4.0	M								<p>This version addresses the changes necessary to reflect the release of ISO/IEC 27001:2022.</p> <p>Please note that in the process to Scope Profile mapping table (table 1 above) TEC.2 (Capability Management was not ticked for Information Management and Security, but was mapped in the actual process below. This has now been corrected.</p>

1.4.1	m	m	m	m	m	m	m	m	<p>Minor changes have been made to several Base Practices and therefore all Scope Profiles have been impacted. These changes are highlighted in a separate Base Practice change document. Variants have also been introduced as noted in the preface.</p> <p>Covering mapping to ISO/IEC/IEEE 12207:2017 & ISO/IEC/IEEE 15288:2015. If these standards are specifically being claimed under the TickITplus certification then the Systems and Software Development and Support Scope Profile is used and consideration must be given to the following Type-C processes: ORG.9 Programme Management if programmes are managed within the origination, TEC.7 Operations Management if operations are included, TEC.8 Maintenance Management if maintenance is included and ARG.1 Acquisition and Contract Management if the organisation uses suppliers. However, inclusion of the following Type-C processes: PRJ.2 Decision Management, PRJ.4 Information Management, TEC.9 Disposal and ARG.2 Supply Management and Business Relationships is mandated.</p>

TickITplus Processes

ORG.1 Human Resource Management

Process ID	ORG.1	Process Name	Human Resource Management			Category	Organizational Processes				Type	A
Process Purpose	To ensure that the resources required to meet the business plan are available.										Version	v4r1
Process Outcome	Process Base Practices		Input Work Products	Output Work Products	ISO 9001 2015	ISO 26262 2011						
OU.1 Human resources are provided to meet the business plan and no impact from lack of human resources is evident.	BP.1 Establish Human Resource Policies and Procedures Policies are established, approved and communicated that ensure human resources are identified, provided, managed, developed and released. Policies take into account all statutory, regulatory and security requirements. Procedures are defined, approved and made available for use, to implement the human resources policies. The policies and procedures are maintained under the management framework.		<ul style="list-style-type: none"> Business Plan Management Framework 	<ul style="list-style-type: none"> Human Resource Policies Human Resource Procedures 	4.4.1c 4.4.2 7.5							
	BP.2 Identify the Required Human Resources Organizational human resource needs are identified based on business needs, including both direct delivery requirements and indirect functional support. Human resource requirements are defined, reviewed, approved and communicated to all stakeholders.		<ul style="list-style-type: none"> Business Plan Delivery Needs 	<ul style="list-style-type: none"> Human Resource Requirements 	4.4.1d 5.1.1e 7.1.1 7.1.2 7.1.5.1	2-5.4.2.6						
	BP.3 Satisfy Human Resources Requirements Human resources are made available to meet the business plan using development, recruitment or reduction as appropriate. The recruitment programme is based on organizational policies, delivery needs and recognized business constraints, and is reviewed by top management on a periodic and event driven basis. Recruitment is undertaken according to procedures, and records are maintained. Reduction plans are established, reviewed and approved for the reduction of human resources. When staff leave the organization, identified exit requirements are satisfied, including return of assets and removal of access. Exit assessments are conducted to identify corrective action or improvement opportunities.		<ul style="list-style-type: none"> Human Resource Requirements 	<ul style="list-style-type: none"> [Human Resources] Improvement Request Recruitment Programme Reduction Plans 	4.4.1d 5.1.1e 7.1.1 7.1.2 7.1.5.1	2-5.4.2.6

PRJ.1 Project Management

Process ID	PRJ.1	Process Name	Project Management				Category	Project Processes				Type		B/C	
Process Purpose	To ensure that the projects meet their objectives.										Version	v4r3			
Process Outcome	Process Base Practices		Input Work Products		Output Work Products		ISO 9001 2015	ISO 26262 2011							
OU.1 The organization achieves project objectives in a controlled manner, and delivery is on time, in budget and to quality.	BP.1 Establish Project Management Policies and Procedures Policies are established, approved and communicated that govern the project management methodology and the delivery of projects. Procedures are defined, approved and made available for use to implement the project management policies. The procedures cover project planning, tailoring, estimating, monitoring and control, resourcing, reporting and escalation, together with supplier, stakeholder, risk and issue management. The policies and procedures are maintained under the management framework.		<ul style="list-style-type: none"> • Business Plan • Management Framework 		<ul style="list-style-type: none"> • Project Management Policies • Project Management Procedures 		4.4.1c								
	BP.2 Scope the Project A scope statement is defined for the project with deliverables agreed by stakeholders. The quality objectives and the requirements for the project are established and documented. Objectives, constraints and assumptions are recorded and agreed before project initiation. Projects select and tailor the appropriate lifecycle model, and the rationale is documented. Estimates are produced against the agreed scope, including any necessary contingency. A budget for the work to be undertaken is prepared. The scope, objectives, constraints, selected approach, estimates and budget are reviewed by stakeholders and approved by management.		<ul style="list-style-type: none"> • Stakeholder Requirements 		<ul style="list-style-type: none"> • Scope Statement 		8.1a 8.1b 8.2.1 8.2.2 8.2.3 8.3.1 8.3.2	2-6.4.5 4-5.4.4 6-5.4.2

	BP.4 Approve, Manage and Store Data Data is approved by defined authorities, managed in accordance with the data management procedures and stored within a defined system.		<ul style="list-style-type: none"> Master Data List 	<ul style="list-style-type: none"> Approval Records 	7.5.2c 8.2.3.2 8.3.4f 8.3.5 8.5.6	2-5.4.2.5				
	BP.5 Manage Data Changes When changes are allowed, data is stored within a defined system that tracks changes, and identifies and provides access and retention controls. All versions of data are uniquely identified. Data is changed through a formal process that involves communication to stakeholders.		<ul style="list-style-type: none"> Change Request Master Data List 	<ul style="list-style-type: none"> Change Record Master Data List 	7.5.3.1 7.5.3.2a 7.5.3.2b 7.5.3.2c	2-5.4.2.5				
	BP.6 Archive and Dispose of Data Data is archived to provide long-term secure storage. Data is disposed of securely to prevent unauthorized access or use after specified retention periods. Data disposal records are maintained.		<ul style="list-style-type: none"> Data Management Procedures Master Data List 	<ul style="list-style-type: none"> Disposal Records Master Data List 	7.5.3.2d					

TEC.2 Capacity Management

Process ID	TEC.2	Process Name	Capacity Management	Category	Technical Processes				Type	B/C
Process Purpose	To ensure that IT infrastructure and facilities are capable of meeting current and future business needs.								Version	v4r0
Process Outcome	Process Base Practices	Input Work Products	Output Work Products	ISO 9001 2015	ISO 26262 2011					
OU.1 Infrastructure and facilities are provided and managed to meet needs, and the service levels are not impacted by lack of capacity.	BP.1 Identify Capacity Requirements Current demand is understood and demand forecasts are collected and analysed to determine their likely impact on existing capacity. Capacity requirements are documented and agreed by stakeholders.	<ul style="list-style-type: none"> • Business Plan • Capacity Measures • Improvement Request • Service Level Agreements 	<ul style="list-style-type: none"> • Capacity Requirements 	4.4.1d 5.1.1e 7.1.1 7.1.2 7.1.3 8.1c						
	BP.2 Establish Capacity Plans The required capacity is planned, taking into account the requirements for availability, continuity, service levels and proposed improvements. The capacity plan is agreed and approved by management. Changes to the capacity plan are managed under the change control process.	<ul style="list-style-type: none"> • Capacity Requirements 	<ul style="list-style-type: none"> • Capacity Plan 	7.5						
	BP.3 Implement Capacity Plans The capacity plan is communicated to stakeholders prior to implementation to ensure that operational plans remain aligned. The capacity plan is implemented and changes to the infrastructure and facilities are managed.	<ul style="list-style-type: none"> • Capacity Plan 	<ul style="list-style-type: none"> • Capacity Measures • Infrastructure Requirements • Resource Needs 	7.1.2 7.1.3 8.1 8.5.1d						
	BP.4 Monitor Capacity The organization periodically measures, reviews and reports operational demand and identifies potential capacity issues. Recommendations for improvement are identified and, when approved, incorporated into the capacity plan.	<ul style="list-style-type: none"> • Capacity Measures • Capacity Plan 	<ul style="list-style-type: none"> • Capacity Plan • Corrective Action Request • Improvement Request 	4.4.1h 5.1.1i 9.1.1 9.1.3 10						

TEC.3 Integration Management

Process ID	TEC.3	Process Name	Integration Management	Category	Technical Processes				Type	B/C
Process Purpose	To assemble and verify the product.								Version	v4r1
Process Outcome	Process Base Practices		Input Work Products	Output Work Products	ISO 9001 2015	ISO 26262 2011				
OU.1 The product is integrated, with no defects found in release and operation related to integration.	BP.1 Define Integration Plan An integration plan is established to cover the integration strategy including details of the integration sequence, stakeholder involvement and verification criteria for the product. The integration plan is reviewed, approved, communicated and maintained under configuration management.		<ul style="list-style-type: none"> Architectural Design System Requirements 	<ul style="list-style-type: none"> Integration Plan 	8.1 8.3.2	4-8.4.1.2 4-8.4.1.7 4-8.4.2.2.1 6-5.3.1 6-7.3.1 6-10.4				
	BP.2 Establish Integration Environment The integration environment is defined, established and verified prior to its use, and is maintained under configuration management. Integration environment interfaces are identified, documented and maintained under configuration management.		<ul style="list-style-type: none"> Integration Plan 	<ul style="list-style-type: none"> [Integration Environment] 	7.1.3 7.1.4	6-10.4.8				
	BP.3 Assemble Product The product is assembled in accordance with the integration plan, and is maintained under configuration management. Traceability is established between the system design and the integrated components.		<ul style="list-style-type: none"> Integration Plan System Components 	<ul style="list-style-type: none"> Product Traceability Report 	8.3.4 8.3.5	4-8.4.2.1.1 4-8.4.3.1.1 6-10.4.2				
	BP.4 Verify the Product The assembled product is verified in accordance with the integration plan, and results are recorded. Equipment and data used to conduct verification activities controlled under configuration management. Defects identified during integration are logged and managed to resolution.		<ul style="list-style-type: none"> Integration Plan Product 	<ul style="list-style-type: none"> Defect Product 	7.5 8.3.4c 8.3.5 8.6	4-8.4.1 4-8.4.2 4-8.4.3.1.1 4-8.4.3.2 6-7.4.8 6-10.4.2 6-11.3.1 6-11.4 8-9.4.3.1 9-5.4.14				

TEC.4 Verification

Process ID	TEC.4	Process Name	Verification	Category	Technical Processes				Type	B/C
Process Purpose	To ensure work products are objectively evaluated and reworked to meet their agreed specifications.								Version	v4r1
Process Outcome	Process Base Practices		Input Work Products	Output Work Products	ISO 9001 2015	ISO 26262 2011				
OU.1 Work products are shown to meet their specifications following verification without rework.	BP.1 Establish Verification Procedures Verification procedures are defined, approved and made available for use to ensure work products undergo at least one form of verification prior to being formally approved and used. The verification approach supports the defined organizational lifecycles. The procedures are maintained under the management framework.		<ul style="list-style-type: none"> Lifecycle Model Description and Assets Management Framework 	<ul style="list-style-type: none"> Verification Procedures 	4.4.2 7.1.5.1 7.5 8.3.1 8.5.1					
	BP.2 Plan Verification Activities The organization develops a verification plan that includes the identification of what is to be verified, when it will be verified, which stakeholders are involved and methods used. Verification planning includes the possible need for rework. The results of previous verification activities are taken into account. The verification plan is reviewed and approved prior to verification being conducted.		<ul style="list-style-type: none"> Verification Procedures 	<ul style="list-style-type: none"> Verification Plan Verification Schedule 	7.5 8.1 8.3.2	2-6.4.7 4-8.4.1.2 4-8.4.1.7 4-8.4.2.2.1 6-6.3.1 6-6.4.6 6-7.3.1 6-9.4 6-10.3.1 6-10.4 6-11.3.1 6-11.4.1 8-9.4.1 8-9.4.2

TEC.9 Disposal

Process ID	TEC.9	Process Name	Disposal	Category	Technical Processes				Type	B/C
Process Purpose	To legally, safely and securely dispose of redundant business assets.								Version	v4.1
Process Outcome	Process Base Practices		Input Work Products	Output Work Products	ISO 9001 2015	ISO 26262 2011				
OU.1 Assets are disposed of effectively and there is no subsequent risk to the organization.	BP.1 Establish Disposal Policy and Procedures A policy for identifying and managing the disposal of redundant business assets is established, approved and communicated. The policy takes into account all environmental, statutory, regulatory and security requirements for safe disposal of business assets and associated records. Procedures are defined, approved and made available for use to implement the disposal policy. The policy and procedures are maintained under the management framework.		<ul style="list-style-type: none"> • Business Plan • Management Framework 	<ul style="list-style-type: none"> • Disposal Policy • Disposal Procedures 	4.4.1c 4.4.2 7.5					
	BP.2 Identify Obsolete or Redundant Assets The organization identifies assets which no longer contribute to the effective operation of the business. Stakeholders are consulted to verify that the business assets are correctly identified as redundant and are valid for disposal. The method of disposal is identified and planned in accordance with the disposal procedures. The plans ensure that items are disposed of in a timely manner.		<ul style="list-style-type: none"> • [Item for Disposal] • Disposal Procedures 	<ul style="list-style-type: none"> • Disposal Plan 	7.1.3 8.1					
	BP.3 Dispose of Obsolete or Redundant Assets The disposal of obsolete or redundant assets is managed in accordance with the disposal plan. Records are maintained to demonstrate that the disposal has been carried out in accordance with the environmental, statutory, regulatory and security requirements.		<ul style="list-style-type: none"> • [Item for Disposal] • Disposal Plan 	<ul style="list-style-type: none"> • Disposal Records 	7.1.3 8.1					

TEC.10 Stakeholder Requirements Definition

Process ID	TEC.10	Process Name	Stakeholder Requirements Definition	Category	Technical Processes				Type	B/C
Process Purpose	To define the requirements of the products and services expected by the customer.								Version	v4r1
Process Outcome	Process Base Practices		Input Work Products	Output Work Products	ISO 9001 2015	ISO 26262 2011				
OU.1 Customers and other stakeholders are actively engaged throughout the development of the product, and the requirements are agreed.	BP.1 Engage Requirements Stakeholders The organization identifies and engages with stakeholders throughout the development of the product to gain a clear understanding of the needs and objectives of the customer. The identified stakeholders are detailed in a stakeholder management plan.		<ul style="list-style-type: none"> [Identified Stakeholders] 	<ul style="list-style-type: none"> Stakeholder Management Plan 	4.2 5.1.2 5.2 7.4 8.2.1					
	BP.2 Develop Stakeholder Requirements Stakeholder requirements are identified, reviewed and documented in a way that provides clear understanding and visibility to all stakeholders. The stakeholder requirements are maintained under configuration management. Stakeholder requirements are traceable throughout development, integration and release.		<ul style="list-style-type: none"> Stakeholder Management Plan 	<ul style="list-style-type: none"> Stakeholder Requirements 	8.2.2 8.2.3.1 8.3.3	3-5.4 3-6.3.1 3-7.3.1 3-8.3.1 4-6.4.1 4-7.3.1 8-6.4.1.1 8-6.4.2 8-6.4.3				
	BP.3 Validate Stakeholder Requirements Stakeholder requirements are validated, issues are addressed and agreement that their requirements have been correctly defined is gained from the customer.		<ul style="list-style-type: none"> Stakeholder Requirements 	<ul style="list-style-type: none"> Stakeholder Approval 	8.2.3.1	8-6.4.3.3				
	BP.4 Manage Changes to Stakeholder Requirements Changes to the stakeholder requirements are formally controlled through the change control process. Changes to the stakeholder requirements are reviewed by stakeholders for their impact on cost, schedule and customer needs. The results of the review are communicated to stakeholders, and records maintained.		<ul style="list-style-type: none"> Change Request Stakeholder Requirements 	<ul style="list-style-type: none"> Change Record Stakeholder Requirements 	8.1 8.2.4	8-6.4.3.4				

TEC.11 Requirements Analysis

Process ID	TEC.11	Process Name	Requirements Analysis	Category	Technical Processes				Type		B/C	
Process Purpose	To transform stakeholder requirements into system requirements.									Version	v4r2	
Process Outcome	Process Base Practices		Input Work Products	Output Work Products	ISO 9001 2015	ISO 26262 2011						
OU.1 The organization has a set of established system requirements that require no unexpected rework.	BP.1 Develop System and Safety Requirements The customer needs and other stakeholder requirements are analysed and interpreted into structured system requirements. The organization considers its own product development strategy in light of stakeholder requirements. System and safety requirements are reviewed and maintained under configuration management.		<ul style="list-style-type: none"> Stakeholder Requirements 	<ul style="list-style-type: none"> System Requirements 	7.5 8.3.4a 8.3.5	3-5.4 3-6.3.1 3-6.4.1 3-7.3.1 3-8.3.1 6-6.4 6-7.3.1 6-8.3.1 6-9.3.1 6-10.3.1 6-11.3.1 9-7.3.1						
	BP.2 Estimate System Requirements Size An estimate of the size of the product is identified, reviewed and documented. The size estimate is verified and converted into budgetary, schedule and resource estimates, which are reviewed and approved by stakeholders.		<ul style="list-style-type: none"> System Requirements 	<ul style="list-style-type: none"> Size Estimates 	8.1 8.2.3	6-7.4.17

AGR.2 Supply Management and Business Relationships

Process ID	AGR.2	Process Name	Supply Management and Business Relationships				Category	Agreement Processes				Type		B/C	
Process Purpose	To establish and manage an effective supply chain.											Version	v4.2		
Process Outcome	Process Base Practices		Input Work Products	Output Work Products	ISO 9001 2015	ISO 26262 2011									
OU.1 The organization manages suppliers effectively and does not encounter any disruptions to the supply chain.	BP.1 Establish Business Relationship Framework The organization identifies its suppliers, along with the processes, roles and responsibilities for managing supplier relationships.		<ul style="list-style-type: none"> Business Plan 	<ul style="list-style-type: none"> Supplier Management Plan 	4.2										
	BP.2 Establish Supplier Management Procedures Procedures for managing supplier relationships are defined covering procurement, management of suppliers, review/acceptance of supplied products and services, communication, supplier feedback, complaints and escalations. Responsibilities for managing each supplier are assigned to designated individuals. The procedures are maintained under the management framework.		<ul style="list-style-type: none"> Management Framework Supplier Management Plan 	<ul style="list-style-type: none"> Supplier Management Procedures Supplier Management Responsibilities 	7.5										
	BP.3 Define, Agree and Implement Supplier Agreement Formal contracts are prepared, reviewed and approved between the organization and the supplier. Records of the review are maintained. The agreements cover as a minimum what is to be provided, competency requirements, communications, monitoring and review requirements, verification and validation needs, and necessary approvals. Suppliers are managed in accordance with the formal contract. Changes to the formal contract are handled through a formal change control process.		<ul style="list-style-type: none"> Supplier Contract 	<ul style="list-style-type: none"> Change Request Review Records 	8.4										
	BP.4 Monitor Supplier Performance The performance of suppliers is reviewed on a regular and planned basis. Reviews consider the performance of the supplier in meeting delivery objectives and contractual obligations. Deviations from required performance are documented and appropriate action taken.		<ul style="list-style-type: none"> Stakeholder Requirements Supplier Contract Supplier Management Plan Supplier Performance Data 	<ul style="list-style-type: none"> Corrective Action Request Supplier Performance Report 	8.4.1

MAT.1 Quantitative Performance Management

Process ID	MAT.1	Process Name	Quantitative Performance Management				Category	Maturity Processes				Type	M
Process Purpose	To identify key processes that are managed within organizationally defined performance limits.										Version	v4r0	
Process Outcome	Process Base Practices		Input Work Products	Output Work Products	ISO 9001 2015	ISO 26262 2011							
OU.1 Projects and other work groups quantitatively manage key processes that operate within organizational performance levels.	BP.1 Establish Quantitative Performance Management Procedure A quantitative performance management procedure is defined, approved and made available for use by projects and other work groups. The procedure defines the practices for using historical organizational process data to understand current capabilities and to monitor the performance of key processes. The procedure is maintained under the management framework.		<ul style="list-style-type: none"> • Business Plan • Management Framework 	<ul style="list-style-type: none"> • Quantitative Performance Management Procedure 	4.4.2 7.5								
	BP.2 Quantitatively Relate Business Objectives to Process Objectives Key processes are formally identified that contribute directly to achieving the aims and objectives of the business plan. The key processes are analysed to identify the performance indicators. Corresponding operational control limits are established to align with business objectives. Operational control limits are determined using historical data and trends from projects and other work groups applying the key processes defined by the management framework. Operational control limits are reviewed periodically and updated based on changes in business objectives, performance and variation of key processes. The selection of key processes is reviewed periodically and updated to accommodate any changes in business needs, plans and objectives. Changes to key process documentation are formally controlled through the change control process.		<ul style="list-style-type: none"> • Business Plan • Quantitative Performance Management Procedure 	<ul style="list-style-type: none"> • Key Process Definitions 	4.4.1g 6.2.1 7.1.5.1 8.5.1a 8.5.1f 9.1.1

Corrective action is taken when performance is unacceptable to bring the project or work group using the key processes in line with the organizational performance limits.</p> <p>Records of the investigation are maintained to support organizational key process improvements and revise the organizational performance limits.</p>		<ul style="list-style-type: none"> • Key Process Variation 	<ul style="list-style-type: none"> • Corrective Action Request • Key Process Analysis 	4.4.1h 5.1.1i 8.5.1f 9.1.3 10							

MAT.2 Quantitative Process Improvement

Process ID	MAT.2	Process Name	Quantitative Process Improvement	Category	Maturity Processes				Type	M
Process Purpose	To improve key processes to achieve required business improvement goals.								Version	v4r0
Process Outcome	Process Base Practices		Input Work Products	Output Work Products	ISO 9001 2015	ISO 26262 2011				
OU.1 The organization improves and optimizes key processes to satisfy business needs.	BP.1 Establish Quantitative Process Improvement Procedure A quantitative process improvement procedure is defined, approved and made available for use by the organization to improve key processes. The procedure is maintained under the management framework.		<ul style="list-style-type: none"> • Business Plan • Management Framework 	<ul style="list-style-type: none"> • Quantitative Process Improvement Procedure 	4.4.2 7.5					
	BP.2 Establish Improvement Plans for the Key Processes Quantifiable improvement objectives are established for key processes based on the business needs, plans and objectives. Improvements to the key processes are established based on common causes of variation of the key processes, industry best practices and benchmarks, technological advancements and innovations, along with improvement recommendations from the organization. Recommendations for improvement are formally documented and approved by senior management. They are supported by an analysis of the return on investment for the proposed improvement, along with a formal definition of the expected improvements in quantified performance. The return on investment for the improvement proposals is documented and understood. Quantitative improvement plans for the key processes are prepared with details of the tasks and activities necessary to implement the improvement and the return on investment. The plans are maintained under change control.		<ul style="list-style-type: none"> • Business Plan • Quantitative Process Improvement Procedure 	<ul style="list-style-type: none"> • Quantitative Key Process Improvement Plans 	4.4.1g 4.4.1h 5.1.1i 6.3 7.5 10					
	BP.3 Implement the Improvement Plans for the Key Processes Improvements are managed using the quantitative key process improvement plans to completion. The performance of improvements to key processes is formally evaluated to ensure expected gains have been achieved.		<ul style="list-style-type: none"> • Quantitative Key Process Improvement Plans 	<ul style="list-style-type: none"> • Key Process Definitions • Quantitative Key Process Improvement Results 	4.4.1g 4.4.1h 5.1.1i 6.3 10.3
